

Fox Height Limited

From Equation to Civilization, and Back.

Company Profile

Eden Square, 7th Floor, Chiromo Road, Westlands, Nairobi, Kenya · Founded 2025

Executive Overview

Sovereign Cloud, AI Infrastructure and Continuum Architecture for East Africa and the world.

Fox Height Ltd is a Microsoft AI Cloud Partner headquartered in Nairobi, Kenya, building the FoxHeight Continuum platform — a twenty-product ecosystem spanning cloud infrastructure, AI orchestration, data governance, cybersecurity, and long-range systems research.

Mission & Engineering Principles

FoxHeight's public platform documentation states its purpose as: "Company identity, principles and East African context."

Principles

- Representation before computation
- Determinism where possible
- Explicit state and observability
- Least privilege and secure defaults
- Honest maturity labelling

Product Ecosystem

FoxHeight Continuum comprises 20 product lines, each carrying an explicit maturity label rather than a uniform claim of production readiness.

Product	Category	Maturity
FoxOS	platform	RESEARCH
FoxAI	intelligence	RESEARCH
FoxData	data	RESEARCH
FoxCloud	infrastructure	PRODUCTION-ADJACENT
FoxFlight	autonomy	CONCEPT
FoxShield	security	PROTOTYPE
FoxLink	network	RESEARCH
FoxEdge	infrastructure	RESEARCH
FoxLab	research	RESEARCH
Continuum	platform	RESEARCH
FoxInsight	intelligence	PROTOTYPE
FoxAuto	automation	CONCEPT
FoxSpace	spatial	CONCEPT
FoxQuantum	research	CONCEPT
FoxGreen	sustainability	CONCEPT
FoxBuild	infrastructure	CONCEPT

Product	Category	Maturity
FoxKnow	knowledge	PROTOTYPE
FoxTwin	simulation	CONCEPT
FoxHuman	human	RESEARCH
FoxFuture	vision	2050 VISION (CONCEPTUAL)

Platform Architecture

Local-first foundation

Architecture decision ADR-001 (Local-first architecture) records the context as East African connectivity and sovereignty constraints, with the decision to prefer local JSON/filesystem and offline-capable cores and to treat cloud as an optional plane — avoiding a mandatory external database.

Service boundary

Architecture decision ADR-002 (PHP/Node boundary) records that PHP owns pages, sessions and CMS functions, while Node owns ranking, search and audit intelligence APIs — a split chosen for clear failure isolation, at the cost of operating two processes.

Stack, as documented

Per the platform README: PHP 8.x + Node.js (standard library) + JSON + vanilla CSS/JS, local-first, with no required Composer or npm packages for the core to run.

Current State & Roadmap

Current release: FoxHeight Continuum v5.7.0 ("System Expansion"), build 2026.08.21-expand, channel production.

Latest recorded platform snapshot (2026-08-21T06:02:39+00:00): 20 products, 8 leads, 3 whitepapers on file, PHP runtime 8.3.6. Bounded evolution cycle. Not autonomous strategy change.

Leadership

Samson Mobisa — CEO and Founder, Fox Height LTD. Sole director building the company's partner and commercial infrastructure. Research/technical contact: mobisa@foxheight.com.
