

FoxAI

Artificial intelligence orchestration with governance boundaries

INTELLIGENCE

RESEARCH

Product Overview

Mission

FoxAI structures model orchestration so every automated step can be observed, limited, and overridden by a human.

What it is

FoxAI is FoxHeight's intelligence orchestration line. It does not claim AGI. It focuses on provider abstraction, prompt pipelines, tool gates, and evaluation hooks.

Core Capabilities

- Provider routing concepts
- Human approval gates for high-impact tools
- Evaluation scaffolding for prompt changes
- Observability spans for inference sessions

Use Cases

- Gated assistant prototypes
- Evaluation harnesses
- Policy-bound tool runners

Technology

Architecture

Requests enter a routing layer, optional tools execute only on allow-lists, and outcomes are logged for review. Ranking on Continuum remains deterministic — not a foundation model.

Security Posture

Tool execution is deny-by-default. Secrets never belong in prompts stored in public content. Audit trails matter more than novelty demos.

Ecosystem & Roadmap

Declared Relations

- FoxAI USES foxdata
- FoxAI SECURED BY foxshield
- FoxAI DEPLOYED ON foxcloud
- foxinsight PROVIDES INTELLIGENCE TO FoxAI
- foxhuman SUPPORTS FoxAI

Open Research Question

Which retrieval and ranking signals stay trustworthy when content is adversarial or multilingual?

Roadmap

Prototype orchestration APIs, then tighter coupling to FoxData lineage. No production AGI claims.

Status: FoxAI is labelled "research" in the FoxHeight Continuum product registry. This label reflects verified implementation state, not a marketing claim. Source: SOURCE_DATA/products/foxai.json.
